Fred Bahurlet/EyeEm/EyeEm/Getty Images Algebra has been developed over thousands of years in several different countries. The earliest methods of solving mathematical problems with one or more unknown quantities come from Ancient Egypt. The very word algebra comes from the title of the 9th-century book by the 9th-century Baghdad mathematician al-Kwarismi, *Hidab al-Jabr wal-Mukubala*. The ancient Babylonians and Greeks also had methods of solving equations with unknown quantities. The 2nd-century Greek Diofantus continued the Greek tradition with his work *Arithmetic*, but it did not have a generalized method of solving equations. After the fall of Rome, progress in the development of algebra continued in India, Egypt and Iraq (then known as Persia). Hindu mathematicians were the first to find that square equations have two roots. Islamic mathematics was influential in the development of Western European mathematical methods. Algebra's knowledge has been leaked to Europe since the 12th century with the translation of Al-Quarimi's work, and has been more fully developed since the 1500s. Abstract or modern algebra is the British development of this area in the 19th century. When you take a real situation and translate it into mathematics, you actually express it; hence the mathematical term expression. Everything left of an equal sign is considered something that you express. Everything to the right of an equal sign (or inequality) is another expression. Simply put, the expression is a combination of numbers, variables (letters) and operations. Expressions have a numerical value. Equations are sometimes confused with expressions. To keep these two terms separate, just ask yourself if you can answer with a true/false one. If so, you have an equation, not an expression, that will have a numerical value. When equations are simplified, expressions such as $7-7$, equal to 0, are often discarded. A few examples: The word Expression of algebraic expression x plus 5 10 times x - 12×5 $5x$ $y - 12$ Word problems consist of sentences. You will need to read the problem through carefully to make sure that you have some understanding of what you are being asked to solve. Pay close attention to the problem to identify key clues. Focus on the last question of the word problem. Read the problem again to make sure you understand what you're asking. Then hold the expression. Let's start: 1. On my last birthday, I weighed 125 pounds. A year later, I put on x pounds. What expression gives my weight in a year? (a) $x + 125$ (b) $125 - x$ (c) $x + 125$ (d) $125x$ 2. If you multiply the n square by 6, then add 3 to the product, the amount is 57. One of the expressions is 57, which of them? (a) $(6n)^2$ (b) $(n + 3)^2$ (c) $6(n + 3)^2$ (d) $6n^2 + 3$ Reply to 1 a) $x + 125$ Reply to 2 d) $6n^2 + 3$ Sample 1 The price of the new radio p dollars. Radio is on sale for 30% discount. What expression do you write that will say the savings that offered on the radio? Answer: $0.3p$ Example 2 Y my friend Doug gave you the following algebraic expression: Subtract 15 times the number n of twice the square number. What is the expression that your friend says? Answer: $2b - 15b$ Sample 3 Jane and her three college friends will share the cost of a three-bedroom apartment. The rental price is n dollars. What expression can you write that will tell you that Jane's share? Answer: $n/5$ Ultimately, familiarity with the use of algebraic expressions is an important skill for studying and conquering algebra. While there is no substitute for a good teacher or teacher, algebra applications will certainly enhance your understanding of the wide range of concepts in algebra when used correctly. After reviewing a number of applications in algebra, here are my picks in applications for algebra. Wolfram Wolfram Algebra Course Assistant This app tops my list for a good reason. I like the title - Course Assistant, after all, it's a stretch to say that algebra can be mastered with the app, however, the app can be a terrific assistant to guide additional learning and understanding. Step-by-step solutions are great, far superior to just having answers. No application can really replace a teacher or tutor. However, this app can certainly support and help you in many algebra topics taught in the classroom, it is designed for high school algebra and early algebra college. All the main topics in Algebra are covered, and this is a powerful homework assistant. Best of all, Wolfram is a leader in mathematical applications. Be careful to the teachers! Students can easily cheat with this app and I'm not to the point where I think any of these apps should be allowed on the exam. Algebra Genie We as genie algebra, it addresses the main algebraic themes (expressions, exponents, linear relationships, Pythagorean theorem, function of the basics, functions, square functions, square root functions, exponential and logarithms, factoring, system of equations, conics. However, students should have algebra basics as this app will build insight and may even support the best grades. This app won't take the teacher's place, but if you're looking for some extra learning to better understand the different algebra topics, it's worth a try. that this app is like a tutorial turned into an app. However, for some students, it works well. This app has some basic up algebra like fractions, exponents, basic equations, but it leads to square equations, matrices, radical and polynomial. It comes from Effortless Algebra's book and app follows the book for the most part. Part. I don't find this as much of an app as others I've considered. This app has pretty much been a tutorial turned into an app. It has exercises and is somewhat interactive. In this case, I prefer the book app. However, there is always room for improvement. See the author of a book about light algebra. Square Master Square Master App: If you don't have a graph calculator, you can rate this app. I liked the detailed step-by-step solutions with this anti-exercise app that just give answers. I listed this app because it's great for those students struggling with squares and it does a great job. It is suitable for performing square equations, inequalities and functions. Again, this is a great practice tool, but students need to have a basic understanding of the squares. This app helps build skill. Caution note to teachers: Students are often cheated with apps like these. Polynomial Long Division Polynomials: These applications are specific for using four operations with polynomials. I've considered separating polynomial applications, however, multiplying, adding and subtracting polynomials are also available. I like this app because it's really simple. There is one focus, manipulation and division of polynomial. The application works very simply, it gives the student the problem of separation in polynomials. The student is working through every step, and when a student is stuck, it's just a matter of clicking on help me. The application then goes through the steps of solving this part of the equation. The help screen is easy to understand and help is available with each problem. I would suggest that the student be aware of the polynomials and the basics of polynomial division. This app is a great tool to help students achieve the skill of separating polynomials. When the teacher is not always available, the app takes over. There are still many applications in different math topics. If you feel that there is a useful app that supports algebra, we would love to hear from you. Apps may not take the place of a teacher or a graph calculator, but they can be assured of building trust and understanding in a variety of algebraic topics. If someone could do it, she could. That's what friends and colleagues said when Roxanne Coady left New York in 1989 to open a bookstore in a small town. Of course they believed in her. She was one of the leading

tax accountants in the country. She was whip smart, driven, and tireless - on 82 different boards, as she likes to say, which is just a slight exaggeration. She even grew up in business: as a girl, she kept books for her father's bakeries. If you were to choose a dream person to start your own bookstore, it would be Roxanne, says friend and Connecticut Public Radio host Faith Middleton. She's so smart in business. Coady proved it was wrong. For the first few years, RJ Julia independent booksellers located on the main drag in Madison, Madison, grew up not by day, but by day. The pressure, however, has overshadowed the dot-com inability to turn profits. Coady says she ignored budgets and was probably \$250,000 of the money she and her husband, a former property developer, had amassed. It was twice as much as she was supposed to invest, but she couldn't resist going all for free wine and food to sign the book, stylish extra strength bags, and excessive bonuses. Instead of solving problems, I threw more money at them, she says. I don't run a store like a business. As an accountant, Cody always used her head. But as a bookseller and book lover, she let her heart take over. She built the most attractive bookstore she could imagine, ignoring the construction of a sustainable business. Now, she says, I combine my head and my heart. Thirteen years after a dramatically changing career, Coady, 54, proved she can pull it off in the end. At the same time that nearly half of the country's independent bookstores have closed, RJ Julia has achieved more than \$3 million in annual sales and modest profits. And Coady, his ever-fashionable, opinion-based, and animated owner, has made the transition from a successful accountant to a successful bookseller. Bookmaker Waiting for HappenCoady's passion for reading and her talent for accounting were inspired by her parents, who survived the Holocaust and immigrated to the United States in 1948, settling on New York's Lower East Side. Although her mother did not yet understand English, she still read to her children, uttering the words phonetically. As soon as Kuadi learned to read, she wanted to develop every children's book in the library in alphabetical order. When she was in high school, her father, a baker, bought the first of 10 bakeries, called Em's, and brought her to a meeting with his accountant. Who will do the accounting? The accountant asked. She is, her father replied. He wasn't joking. The accountant agreed to teach her, and Coady, the eldest of six, juggled school, family nanny duties and salary books until she left for college. Now my father feels like I work too hard, she says, laughing. He says: You can't ride two horses with one. I tell him: Dad, this is what you raised me to do. By the 1980s, Coady had become a partner and national tax director at BDO Seidman, a New York-based international accounting firm. She was the first woman chosen for the job. People are telling me now: It must have been boring to work with taxes, says Cody. But I loved it. She had a corner office on the 12th floor overlooking Central Park, and she was earning about \$250,000 a year. In 1988, she was featured on the cover of Money magazine, which she dubbed an accountant. Head stuff, to be sure. But it wasn't enough to keep her there. As much as I liked the work, it enriches, says Coady. It was in terms of dollars, but it didn't enrich my heart. At least not in the way books are. Was. Even when she climbed the corporate ladder, Cody remained an insatiable reader. She will always have an affair with her, stealing a few minutes in a taxi, on a train, anywhere. She always recommended her favorite titles to friends. I ran a little library out of my house,' she says. People said, Oh my God, that was the best book you gave me. They told her something. It's time to change something. Creation of the modern city Of GreenR.J. Julia, named after Cody's grandmother, Julia, who died in a concentration camp during World War II, is much more than the store where you buy the last Harry Potter or John Grisham. It is a local institution that has become intertwined with people's lives as several businesses. It's the heart of the community, says Norman Weissman, a retired writer, director and producer who lives in nearby Guildford and attends monthly book club meetings at RJ Julia. The bookstore and the city are inseparable. District residents feel responsible for supporting an independent bookstore - their bookstore - even if it means paying a little more at times. From the beginning, Coady wanted RJ Julia to be a modern green city. I felt like people were disconnecting from each other, she says. We've lost a public space to talk about things that matter. The store hosts more than 200 events a year, from book signings to meetings at the book club to children's hour on Wednesday morning. By lobbying publishers and serving guest authors, Coady made Madison, a wealthy coastal city with 2,200 residents, a regular book-tour stop between New York and Boston. The walls are lined with dozens of autographed photographs of past visitors: Jimmy Carter, Harrison Keylor, and Anne Rice. At Coady's proposal, Lee Jacobus started the Classical Literature Book Club at RJ Julia. An emeritus professor of English at the University of Connecticut, he prepares as if he still teaches in class, reading, analyzing, and taking notes 40 minutes a day, three days a week. It's a huge investment of time, and, yes, I do it for free, says Jacobus. But this is an institution that should be supported. This is important for the intellectual life of the city. For RJ Julia to distinguish himself in an increasingly crowded market, Coady believes he must offer unprecedented service and experience. Like their boss, employees read well, which prepares them for manual sale, that is, to recommend books that they or their colleagues have read. That's the value we add to the book-buying experience, coady says. We put the right book in the right hands. The best-selling section of the store is the recommendations of the staff, where each book is accompanied by a shelf of go talk, a capsule review from a bookseller, or in the case of the new Harry Potter, the child of the bookseller (I'm 11 and I finished exactly five days, right up to an hour! Coopersmith is one of 35 booksellers on staff. Like Cody, she is sociable, utterly unconditional and able to talk about books all day. She can't imagine working on a chain, even one that goes to Waterford, about 15 miles from where she lives. There are too many rules, coopersmith says. Here, I can give a discount to the customer whenever I want. It's true. Coady allows staff to do everything they can to make the customer happy. There may not be many official rules, but the staff definitely knows the kind of store that she wants RJ Julia to be. When it comes to sharing likes and dislikes, Coady is an open book. As she reminds employees, she prefers the sentence: Let me know if I can help, or do you find what you need? Can I help you? It strikes her as obsessive. For Natalie Ferringer, it was love with RJ Julia at first. Dark wooden bookshelves, brass lamps, and the signatures of various writers written on the hardwood floor give a place to the atmosphere of a bookstore in Europe or New York. Ferringer, head of political science at New Haven University, can spend an entire day of shopping, which means \$350 to \$400 worth of books a month. And yet, it's hard to say who wins more: a Ferringer or a bookstore. I know them by their first name,' she says of the staff. There's Nancy, Karen, Lisa, Suzanne, Meredith, Beth, Babette, Roxanne. It's the heart of the community, says RJ Julia Client. The bookstore and the city are inseparable. Perhaps the best measure of RJ Julia's relationship with her clients comes from Denise Harrington, an avid reader of murder mystery and client from the start. During a recent visit, she took a special order, Thin Woman, a carefree British who did it, written by Dorothy Cannell and originally published in 1984. What is remarkable about its purchase is that Harrington never requested a book. In fact, she had never even heard of it. Suzanne ordered it for me without my knowledge, she says. I knew she would love it, says Coopersmith. She was right. Roxanne EffectWhen Coady started RJ Julia, Madison, like many small towns, was in decline. Suburban big retailers were furious. After I opened, the theater, the hardware store, five dares, and the restaurant were all closed, she says. I thought: What did I just do? Now, Madison is a different story. Although the business district consists of just one long block on Boston Post Road, there is an art house and an elegant Italian restaurant opposite RJ Julia. There are plenty of shops and boutiques. There's even a lot of Starbucks. As entrepreneur, Coady has come a long way himself. She manages RJ Julia as a business, with budgets, a tutorial, and more structured grades. By coincidence, her son Edward and the store were born in the same year. Since turning 13 this year, says Coady, both have had their bar Edward became a man, RJ Julia mature business. In reality, however, adding corporate discipline to a bookstore remains a challenge, especially without the financial incentives it had at its disposal at a major accounting firm. Instead, Coady offers a casual, fun environment in which booksellers can be their passionate self. They constantly remind her that the operative word in an independent bookseller is independent. When Cody tried to force the staff to wear matching RJ Julia shirts, they refused. So she bought RJ Julia buttons that no one wore for long. The newly arrived window green RJ Julia lanyard in the office may be next. That's where the democracy thing shoots me in the foot, she says. Kud's natural effusiveness and love of writing - she reads about six books at a time - make her an irresistible bookseller. When Roxanne is on the floor, our sales go up 20%, says store manager Meredith Warner. Faith Middleton, a radio host, experiences roxanne twice a month when Coady appears on her show to talk about books. Recently, when she described Family History, Dani Shapiro's novel about her mother's attempts to save her fractured family, hair stood on my neck, Middleton said. You could hear the pin drop in the studio. This passion fills every square foot of RJ Julia, and every ounce of its owner. When Coady first thought about changing careers, she imagined that managing a bookstore would be a change of pace, less demanding of her than being an executive at a large firm. I often joke that I gave up money for a while, and now I don't have either, she says. It's still Type A, so it's no surprise that running a successful bookstore isn't enough. Currently, it is expanding the children's section, modernizing the territory of the gift shop and developing a business plan to attract the brand in new directions. Second RJ Julia? A chain of shops? Cody can't tell. This chapter has not been written yet. Sidebar: 5 Great Reads Everyone has time for one discretionary thing, says Roxanne Coady, owner of RJ Julia. My reading. Below are five of her all-time favorite books. If that's not enough, check out RJ Julia's lists of recommended books for adults (www.rjulia.com/fivefeet.htm) and children (www.rjulia.com/threefeet.htm). The stones from the Ursula Hegi River are about World War II and the Holocaust from the point of view of a small German town that may or may not understand what is happening, but in a quiet sense imitates what is happening. You feel the influence of betrayal and be complicit through silence. Dear friend: the life of Abigail Adams Lynn Withey Kind of Revolution from Abigail's perspective, what it was like at home, raising their children at a dangerous time. The Book of Laughter and Oblivion by Milan Kundera It is about grief as a way of defining you as you need it, to live and function in a meaningful way. It's a philosophical book, but in Eastern Europe, Europe, Kafka way. Bluest Eye's Toni Morrison Is the narrator of a black girl who has been abused, and a novel about how she moves through that experience. It's one of those books that changes the way you look at the world. The children's poetry anthology elizabeth sword I've read from this to my son since he was two years old, and we always find something that amuses us, regardless of the mood we're in in Chuck Salter (csalter@fastcompany.com) - senior writer of the fast company based in Baltimore.
